The "Solo" has to be installed indoors.

Please follow these simple steps:

- unplug your CloudWatcher from the power supply (if applicable)

- using the same power supply, power the "Solo" - any of the two plugs will do

- with the included (short) cable, join the other jack plug in the "Solo" with the CW

- Attach the SubD-9 (serial) from the CW to the "Solo"

- and, of course, connect the Solo to your local network using a standard RJ45 cable (not supplied)

... that's it. In a few seconds the "activity" LED in the "Solo" will start blinking (slowly), showing it is communicating with the CloudWatcher.
